Know Paint

There's a paint education in this advertisement. Buy by the job, not gallon. Buy by the paint put-on; that's the job. The price of paint is so much a gallon; that can't be helped, but amounts to nothing. The price of painting is so much a day; that can't be helped, but amounts to nothing. Put them together. How can you do it? You've got to lose perhaps half of your money. Devote, 10 gallons enough for the average job; an average paint, 15. Now reckon your costs. Count labor a day for a gallon. Devote 10 days; the other 15. Devote about \$50; the average paint about \$70 or \$80; the dearer the labor the bigger the difference, always that way. But that's for the job. How long is it going to last? One twice as long as the other.
